

# THE "RIPPLE EFFECT"

When Oregon farmers grow crops and livestock they do more than just produce food. Many other things happen as a result of agriculture. That's called a "ripple effect." Agriculture creates food that must be transported, processed and sold. Many things are necessary to produce the food you eat.

It's a good estimate that one Oregon farmer creates three to four jobs OFF the farm. (Maybe you have a friend that works in a fast food restaurant. How's that a "ripple effect" of agriculture?) \_\_\_\_\_

---

---

Look at the items on the left. Then try to guess the "ripple effect" (something that has happened because of what the farmer did). Write the letter of the ripple effect by its matching statement.

## RIPPLE EFFECT
